

Rubber Speed Cushions

Speed cushions are a series of small speed humps installed across the width of the road. They are designed to slow cars without affecting emergency response time. The wider wheel base of emergency vehicles allows them to straddle the cushions while other vehicles must ride over them, slowing down to pass. Speed cushions are placed across the width of the road.

7' Cushion Profile

Features

Installed as **several small speed humps** placed across the width of the road leaving gaps or spacing between them.

Traffic Logix speed cushions are constructed of patented interlocking units that **snap together like puzzle pieces**.

The 18" x 42" units that can be constructed to create speed cushions of **any width or length**.

Choice of **bright yellow or white reflective highway tape** is embedded into each unit so that cushions are highly visible to drivers.

Customizable with choice of **squares and/or double chevron arrows or single MUTCD marking**.

Environmentally friendly cushions are made of **100% recycled rubber**.

Speed cushions can be installed permanently or **removed and reinstalled** for road repairs or resurfacing.

Cost effective rubber cushions are **long lasting and durable**, and do not require frequent maintenance and replacement like asphalt cushions.

Rubber units are already molded to specifications for uniform installations and **better driver acceptance**.

Quick and easy to install without road closures.
